About Me

Im Uktamjon Toshmatov was born and raised in Tajikistan in a town called Spitamen which is located in the northern part of the country. In 2021 I graduated Tajik Technical University of Tajikistan and I studied Aircraft Engineering. The same year I took up learning Front-end development with a guidance and mentorship of senior developer while working part-time as an English teacher in Education Centers.

Experience

Experience Front-End Developer | Self-employed | Intern | 2024 — Present

I have been researching and learning since 2021. For almost 2 years I had looked into frontend technologies such as Javascript, Typescript, HTML5, CSS, SCSS and modern framework Angular. I also learnt to apply css library Bootstarp, Angular Material and component library DevExreme. To understand the mechanism of each technology I also used to create small projects using these tools.

In 2024 I decided to create something big and professional that would give me real experience along the way considering the struggle of getting a first job as Junior Developer in the job market and I came up with the idea of developing Admin Dashboard with Role-Based-Access-Control using Angular 12 and I used Data-base json as a backend

After 9 month of hard work my project was completed and published on Github

In 2024 I started to create full-featured Online Store with permission-based Admin dashboard using Angular 14 and also with real backend side which has been created by senior developer. The project is deployed and publicly available

Link: <https://nova-electro.tob.llc/store/home>

In my projects I focused on developing maintainable scalable and optimized SPA applications using Angular. I have implemented lazy-loading modules, and also integrated angular guards for route protection, interceptors and change detection on push strategy in order to improve performance. I would say I tried hard to write clean code, responsive and modern design and also applied DRY coding as well.

From February this year(2026) till July I worked in a local tech company called Robitai nav as intern and due to a long distance and some personal reasons I quit from that job.

I worked on multiple projects and was responsible for Admin panel side. I maintained, refactored and created new features where its needed and projects were fully signal based utilizing Angular 21 along with Taiga components

What have I done?

- Created two full-featured SPA projects from scratch: an admin panel and an ecommerce platform.

- Utilized Angular (12/14), RxJS, Typescript ngx-translate, lazy-loading, ngx-mask, Devextreme component library and Angular Material.
- Implemented Google and Facebook authentication. • Designed application architecture, route protection, role-based access, and multilingual support.
- Applied responsive design
- Integrated lazy-loading, change detection on push methodology and track by function for tables to improve performance.
- Created multiple standalone components to apply modern architecture and lazy-loaded them to boost performance
- Focused on clean, maintainable code using DRY

Projects

NovaElectro is permission based Online Store which has client side and Admin panel with real backend.

- Responsive e-commerce store for selling electronics.
- Features: shopping cart, product filtering, user auth, localization, pagination, checkout module, product review, account module.
- Admin dashboard-permission based, supports creating products blogs product tags, and media module to import media files from local device and so on
- Tech stack: Angular 14, Typescript, HTML5, SCSS, Angular materials Bootstrap, RxJS, ngx-translate, ngx-mask, devextreme data-grid tables.

Angular Admin Panel is role-based admin dashboard to manage roles and permissions of users. It implements responsive design and solid architecture

- Includes route guards, lazy-loaded modules, and dynamic UI based on roles.
- Tech stack: Angular 12, Typescript, HTML5, Bootstrap, Rxjs, Angular Material, RxJS, SCSS.

Education

Technical University named after Osimi

Faculty: Aerospace Engineering | 2017 — 2021

Skills

- Frontend: Angular 12+, TypeScript, JavaScript, HTML5, SCSS,
- Architecture: SPA, Lazy-loading, Modular Design, Route Guards, Interceptors
- Authentication: Google / Facebook
- Localization: ngx-translate
- Library: RxJS , Devextrem component library, Angular Material , Bootstrap, Tailwind, Taiga
- Tools: Git, GitHub, Gitea VS Code, Webpack
- Deployment: Remote server and GitHub Pages

Languages

- Russian — Fluent
- English — Upper-Intermediate (strong technical understanding, documentation reading, professional writing and speaking)
- Uzbek / Tajik — Fluent
